

Calendar Application Prototype

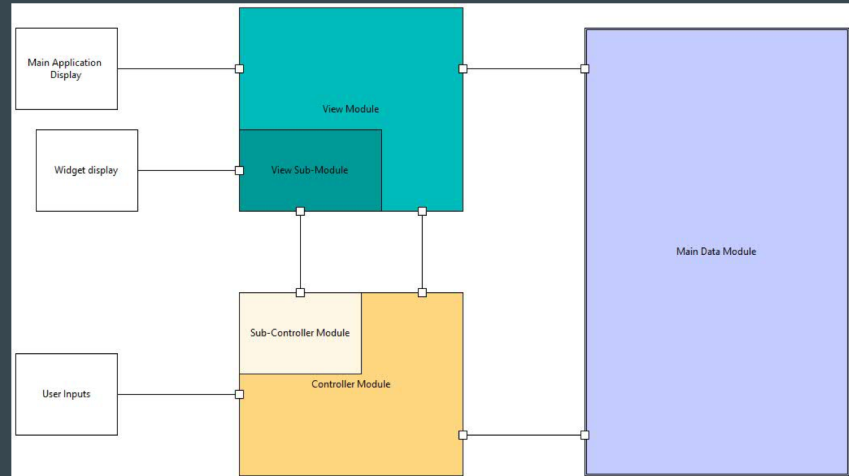

By: Kyle Allen, Mhealyssah Bustria,
Jasper Cavins, and Favian Quach

Date: Friday 19 April 2019

Quick Recall

What our system looks like:

- We are using model control view architecture
- Using this so the user has more control and easier access to what he can see on their application

Quick Update

Functions Implemented:

- See a calendar and it highlights the current date
- Able to add an event using the button
- Problem is we haven't implemented reading from the database to add the event to the calendar UI

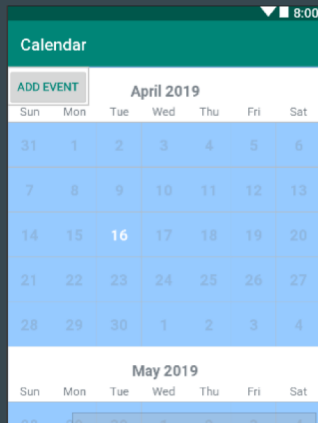

Plans

What we are currently working on:

- the other calendar views
- Getting events to to calendar (AKA Database)
- widget = to-do list
 - android studios → built-in widget support

What we will work on next:

- Clean up the user interface
- add other options
- Profiles

End
